Question 1 | Correct Mark 1.00 out of 1.00

Convert the following algorithm into a program and find its time complexity using the counter method.

```
void function (int n)
{
    int i= 1;
```

```
    int s =1;
```

```
    while(s <= n)
    {
         i++;
         s += i;
     }
}
```

Note: No need of counter increment for declarations and scanf() and count variable printf() statements.

Input:

A positive Integer n

Output:

Print the value of the counter variable

For example:

Input	Result
9	12

Answer: (penalty regime: 0 %)

```
#include <stdio.h>
int main() {
    int n;
    int i= 1;
    int s =1;
    int count=2;
    scanf("%d",&n);
    while(s <= n)
    {
         count++;
         i++;
         count++;
         s += i;
         count++;
     }
     count++;
     printf("%d",count);
     return 0;
}
```
